

## ABSTRACT OF THE INVENTION

The method and apparatus of the present invention includes a computer implemented injection molding configuring subsystem which enables a customer to interactively specify and  
5 design a system using a mix of parameters that the customer specifies and are manufacturing process determined. The configuring subsystem is connected to a computer network such as the Internet. The method and apparatus of the present invention further includes a computerized business and processing subsystem in communication with the configuring subsystem. The computerized business subsystem automatically provides a cost and schedule for a system  
10 configured by the configuring subsystem and additionally processes an order for the system. The processing subsystem automatically processes the customer's inputs and generates drawings for the configured system.
